

A dramatic sunset over a beach. The sky is filled with dark, heavy clouds, with the sun breaking through near the horizon, casting a golden glow. The sun's rays create a shimmering path across the water in the foreground. In the distance, a few people are visible on the beach. A dark cliff is on the left side of the frame.

## INTRODUCTION

Namron was formed in 1966 to provide a comprehensive range of scuba equipment to the diving public.

Since then our company has been ever evolving to not only accommodate the diving market but other areas. We moved from solely manufacturing Neoprene wetsuits to an extensive range of Neoprene products and then on to a range of drysuits. All of our products are manufactured to the highest specifications using quality materials by our dedicated and experienced team.

We are proud to say that all our manufacturing is still based at our premises in the U.K. We feel this allows us to respond quickly to our customers needs and provide a service that may not be matched if our suits were imported. This also enables us to offer a fully comprehensive post sale service to ensure that the continuing needs of our customers are met.

Our aim is to provide our customers with the highest standard of quality products combined with the best possible service. If you have any questions or specific requirements please contact us by telephone or email and one of our experienced team members will be happy to help.

## HEREFORD & WORCESTER FIRE AND RESCUE

In July of 2006 we attended a demonstration day hosted by Hereford & Worcester Fire and Rescue Service together with several other manufacturers . The main purpose of the day was to allow H&WFRS to consider the suitability of the equipment on offer against the service's requirements.

Following the demonstration day we were invited to submit a drysuit for further evaluation. The suit was to H&WFRS specification and to be used in operational situations for a three month trial period by swiftwater rescue personnel.

After the evaluation period, meetings were arranged to discuss the suits performance and specification in further detail with the evaluation personnel. This process allowed us to design and manufacture a production sample for final approval.

This evaluation process enabled H&WFRS to receive a product that is specific and unique to their requirements.

As a company we endeavour to give every customer the product they need. We will treat every customer on an individual basis, taking into account their specific requirements and needs.
